ANGULAR DEVELOPER

I have 4 years of experience in programming and i have a strong foundation in angular and systems design. My passion lies in solving complex problems and creating innovative, sustainable products

SKILL

Frontend:
- HTML, CSS, JS
- SCSS, LESS, Bootstrap 4, Bootstrap 5
- Angular
- Responsive, Cross-Browser
- RxJS, State Management

Backend:
- .NET, JAVA

Database:
- SQL server, MySQL

Source Control:
- Git

EDUCATION

Jul 2019 - Jun 2024
Hanoi University of Civil Engineering
• Faculty: Information Technology
• Majors: Software Engineer

HOBBIES

• Reading tech related content
• Creating personal project
• Soccer
• Gaming
• Music

WORK EXPERIENCE

VNCLOUD **02/2022 - 08/2024**

•Technical Stack:
- Frontend:
  - Angular +
  - Bootstrap
- Deployment:
  - IIS
- Others:
  - Git for source control
  - Redmine for project management.

Material Management System (MMS) **02/2022 - 01/2023**

• Project description : Material management system in automobile production
• Position : Frontend Developer
• Team size : 12
• Reponsibility:
- Develop CKD, PIO Module Part for imported accessory, from ordering to receiving goods accessory in TMV
- Improved UI/UX, Create new user friendly screens.
- Optimized application speed with user interface
- Write functional requirement documents and guides.
- Making responsive app, design tablet-based features.
- Communicate with BE team about API solutions and data

Business Trip System (BTS) **01/2023 - 05/2024**

• Project description : Employee business trip management system
• Position : Frontend Developer
• Team size : 20
• Reponsibility:
- Optimize the system, improve user experience
- Mainly responsible for the user interface and API processing from the backend
- Build and change old interfaces and functions, integrate automatic file features and support linking with other systems
- Responsible for deploying code to the system.

PERSONAL PROJECT

Unpacking Part System

- https://github.com/Quang2710/UnpackingPartSystem
- Description: Unpacking Part System Management
- programming used:
  - ASP .NETCORE
  - Angular
- Functions: Login, Logout, Devaning, Unpacking, Move Part Pc Store

Covid-19 Android App

- https://github.com/Quang2710/Covid-19-Android-App
- Description: Covid-19 epidemic tracking app
- programming used:
  - Java Android
  - FireBase
- Functions: Login, Logout, Sign Up,Data Tracking, Notification

Website DattingApp

- https://github.com/Quang2710/DatingApp.git
- Description: Dating website
- programming used:
  - ASP .NETCORE
  - Angular
- Functions: Login, Logout, Text message, View likes, Sign Up

Gift and Hospitality System (GHS) **02/2024 - 08/2024**

• Project description : System that manages the recording, tracking and approval of activities related to gifts and hospitality (hospitality) within an organization.
• Position : Frontend Developer, Technical Lead
• Team size : 15
• Reponsibility:

- Analyze, conceptualize and design applications
- Evaluate team performance, provide feedback and support for improvement.
- Evaluate and improve code quality through code reviews
- Build and develop design models
- Work with Product Owners, Project Managers, and other stakeholders to understand project requirements.
- Write functional requirement documents and guides.

Viettel Software **09/2024 - 09/2025**

•Technical Stack:

- Frontend:
  - Angular 18
  - PrimeFlex
  - Nx
- Others:
  - GitLab for source control
  - Jira for project management.
  - Figma for design management

Vietnam Airlines Mobile Operation (MO) **09/2024 - 09/2025**

• Project description : Management and operation support system for Vietnam Airlines aviation operations
• Position : Frontend Developer
• Team size : 80
• Reponsibility:

- Developed EDM and EFF modules.
- Improved UI/UX and created user-friendly screens.
- Optimized app performance and responsiveness.
- Designed UI/UX in Figma and built reusable components.
- Fixed bugs and delivered new features.
- Collaborated with backend developers and business analysts for seamless functionality.
- Build source code and common component
- Divide work among team members, support each other and work together to find solutions
- Make Daily Progress Report

FINT **09/2025 - Present**

•Technical Stack:

- Frontend:
  - Angular 18
  - Nx
- Others:
  - GitLab for source control
  - Redmine for project management
  - Figma for design management

Management System – Military Department **09/2025 - Present**

• Project description : A Personnel Management System designed to centrally manage military staff information, organizational structure, assignments, and workflow processes. The system improves data accuracy, streamlines personnel operations, supports approval flows, and enhances overall management efficiency through digitalization.
• Position : Frontend Developer
• Team size : 20
• Reponsibility:

- Fixed bugs and implemented core features for personnel management modules (profile management, assignment updates, approval flows).
- Enhanced UI/UX and improved application performance for large data operations.
- Worked closely with backend developers to ensure accurate data synchronization and smooth workflow execution.
- Participated in requirement analysis and helped refine feature specifications with business analysts.
- Implemented UI screens based on Figma flows and built reusable components for consistent design.
